# **INTRODUCTION**

A total of 2,987 randomly-selected students at IUPUI were invited to participate in the 2010 Indiana College Substance Use Survey. A total of 521 students responded to the survey, for a response rate of 17.4%.

Table 1. Response rate

Number of students invited to participate	Number of respondents	Response Rate
2,987	521	17.4%

Three criteria were used to clean the data. Surveys were discarded if any of the following conditions were met:

- gender information missing,
- inconsistent responses on substance use across time measures (monthly vs. annually) for more than one-third of the substances queried, and
- patterns of responses were pharmacologically implausible (i.e., a combination of drugs and frequencies of use whose cumulative effect would be lethal).

A total of 57 surveys were rejected due to meeting at least one of the criteria, leaving 464 usable surveys (89.1%).

Table 2. Number of usable surveys

	Frequency	Percent
No gender reported	41	7.9
Surveys rejected due to error check	16	3.1
Total number of usable surveys	464	89.1
Total	521	100.0

### **KEY FINDINGS**

### ANNUAL PREVALENCE

Three-fourths of the IUPUI students reported using alcohol in the past year, including almost half of the students under 21 (48%). One quarter of the students (24%) smoked cigarettes and nearly as many (22%) smoked tobacco with a hookah/water pipe. Use of marijuana in the past year by IUPUI students was significantly lower than the statewide rate (all Indiana students participating in the 2010 survey) (16% vs. 22%). One in nine of the IUPUI students (11%) reported taking prescription medications not prescribed to them. The misuse of prescription medications was the most common substance used after alcohol, tobacco, and marijuana.

Male IUPUI students reported significantly higher rates of cigar and smokeless tobacco use than the female students. Over one-fourth of the male IUPUI students (28%) smoked cigars in the past year and one in ten (10%) used smokeless tobacco. Males also reported statistically higher rates of cocaine, hallucinogens, and "other illegal drugs" than female students. Rates of alcohol, cigarettes, and marijuana use were not significantly different between the genders.

When analyzed by age, almost eight in ten students 21 or older (79%) reported drinking alcohol in the past year, compared to 48% of the underage students. Students under 21 were much more likely to report smoking tobacco with a hookah/water pipe (35% vs. 19%), and for use of opiates (6% vs. 2%).

Table 3. Percentage of students reporting use of select substances in past year

# MONTHLY PREVALENCE

The percentage of IUPUI students reporting alcohol use in the past month was significantly higher than the statewide rate (all students participating in the 2010 survey). Almost three-fourths of the IUPUI students drank alcohol in the past month (72%), including half of the underage students (49%). One in six of the IUPUI students (17%) smoked cigarettes in the past month, and one in ten (10%) used marijuana, which was significantly lower than the statewide rate (15%).

Male IUPUI students used cigars and smokeless tobacco at significantly higher rates than females, with approximately one in seven IUPUI students (15%) smoking cigars and 5% using smokeless tobacco. The rate of marijuana use was also significantly higher for males, with 13% reporting use in the past month compared to 7% of the female students. Male IUPUI students also reported statistically higher rates of cocaine and hallucinogens use in the past month than female students. There was no statistical difference between the genders regarding alcohol or cigarette use.

Three quarters of the students 21 years of age or older (75%) reported drinking alcohol in the past month, compared to half (49%) of the underage students. One quarter of the students under 21 (26%) smoked cigarettes in the past month, compared to 16% of the older students. Students under 21 were also much more likely to smoke tobacco with a hookah/water pipe, with one in five (20%) reporting the behavior, compared to 8% of the older students. The younger students also reported significantly higher rates of hallucinogens, opiates and designer drugs.

Table 4. Percentage of students reporting use of select substances in past month

# **BINGE DRINKING**

Over one-quarter of the IUPUI students (28%) reported binge drinking in the past two weeks. Binge drinking was defined in the Indiana College Substance Use Survey as four or more drinks in one sitting for females and five or more drinks in one sitting for males. This gender-specific standard follows the definition established by the National Institute on Alcohol Abuse and Alcoholism. The rate of binge drinking by IUPUI students was statistically lower than the rate of all Indiana students participating in the 2010 survey. Male IUPUI students reported significantly higher rates of binge drinking in the past two weeks than females, with over one-third of the males (37%) reporting the behavior compared to approximately one in five (22%) of the female students. Students 21 or over were more likely to binge drink than underage students (30% vs. 17%).

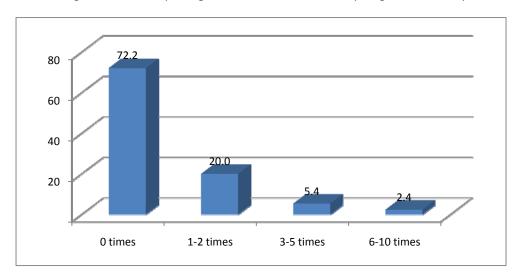

One in five IUPUI students reported binge drinking once or twice in the past month, and 8% reported doing so three or more times.

Table 5. Percentage of students reporting binge drinking in the past two weeks

	All Students		Ву	Gender		Ву	Age		
	IUPUI	Indiana		Males	Females		Under 21	21 or Over	
Binge Drinking	27.8	36.8	***	37.0	21.8	***	16.9	29.6	*

Note: Statistically significant difference at: \* p < .05, \*\*\*p < .001

Figure 1. Percentage of students reporting select number of times they binge drank in the past two weeks

# CONSEQUENCES

Table 6 presents findings on select consequences reported by IUPUI students as a result of their drinking. Almost one-fourth of the IUPUI students who drank alcohol in the past six months (24%) reported driving a car while under the influence, and one in five (19%) reported feeling bad about their drinking. One in six of the students (16%) blacked out from drinking and one in nine (11%) reported engaging in risky sexual behavior as a result of their drinking. Rates of consequences as a result of drinking were significantly lower for IUPUI students than for all Indiana students participating in the 2010 survey for many of the consequences investigated.

Table 6. Percentage of students who reported select consequences as a result of drinking (n = 379)

Consequence	IUPUI	Indiana	
Spouse/partner or parents worried or complained about your drinking	9.8	13.5	*
Felt bad about your drinking	19.3	27.2	**
Been unable to stop drinking when you wanted to	7.7	10.0	
Attended Alcoholics Anonymous	0.3	1.0	
Created problems between you and your spouse/partner	8.4	11.8	
Gotten into trouble at work or school because of drinking	2.6	5.1	*
Neglected your obligations, your family, or your work for 2 or more days in a row because you were drinking	2.6	4.4	
Gone to anyone for help to reduce your drinking or your potential problems due to drinking	1.8	1.9	
Been in the hospital because of drinking	0.8	0.8	
Been arrested even for a few hours because of drinking	1.8	2.4	
Been arrested for drunk driving or driving after drinking	0.8	1.2	
Driven a car while under the influence	23.5	20.4	
Gotten into physical fights when drinking?	4.0	5.8	
Experienced unwanted sexual attention such as being touched when you don't want to be, forced kissing, etc.	4.2	11.2	***
Engaged in risky sexual behavior such as having unprotected sex or sex with someone you just met because you were drinking	11.1	13.9	
Missed class or assignments	9.5	16.3	**
Forgot where you were or what you did (blacked out)	15.8	26.3	***

Note: Statistically significant difference at: \* p < .05, \*\*p < .01, \*\*\*p < .001

Almost one-third of IUPUI students who used drugs in the past year (31%) had driven a car while under the influence of drugs. Approximately one-fourth of the students reported abusing more than one drug at a time (24%) or feeling bad about their drug use (24%). Ten percent had missed class or an assignment due to drug use.

Table 7. Percentage of students who reported select consequences as a result of drug use (n = 132)

Consequence	IUPUI	Indiana	
Abused more than one drug at a time	23.5	25.1	
Been unable to stop using drugs when you wanted to	9.8	9.0	
Ever had blackouts or flashbacks as a result of drug use	6.8	9.8	
Ever felt bad or guilty about your drug use	23.5	26.0	
Had your spouse/partner complain about your involvement with drugs	7.6	9.5	
Neglected your family because of your use of drugs	6.1	4.8	
Engaged in illegal activities in order to obtain drugs	6.1	6.8	
Gotten into physical fights because you were using drugs	1.5	1.8	
Ever experienced withdrawal symptoms (felt sick) when you stopped taking drugs	8.3	8.1	
Had medical problems as a result of your drug use (e.g. memory loss, infections, convulsions, bleeding)	5.3	4.2	
Driven a car while under the influence of drugs	31.1	24.8	
Gotten in trouble at work because of drug use	2.3	1.8	
Been in very vulnerable situations, such as a situation in which you could have been hurt and/or date raped when using drugs	4.5	5.2	
Engaged in risky sexual behavior such as having unprotected sex or sex with someone you just met because you were using drugs	7.6	6.5	
Failed a class because of drug use	2.3	1.6	
Missed class or assignments due to drug use	10.6	10.1	

# AGE OF FIRST TIME USE

IUPUI students first used alcohol at an average age of 17.5 years which is statistically later than the age of all students who participated in the 2010 survey. IUPUI students' average age of initiation of cigars and smoking tobacco with a hookah/water pipe were also significantly earlier than the statewide average. Male IUPUI students reported significantly lower average age of first time use of marijuana and prescription medications not prescribed to them, while female students reported an earlier age of initiation of methamphetamine.

Table 8. Average age of first time use of select substances<sup>1</sup>

	All Students			Ву	By Gender			By Age		
Substance	IUPUI	Indiana		Males	Females		Under 21	21 or Over		
Cigarettes	16.4	16.3		16.6	16.2		15.3	16.5		
Cigars	18.5	17.9	*	18.1	19.2	*	17.4	18.7	*	
Chewing/smokeless tobacco	17.7	17.2		17.7	17.3		17.3	17.7		
Smoking tobacco with hookah/water pipe	19.7	18.5	***	19.3	20.1		18.2	20.1	***	
Alcohol	17.5	17.1	*	17.4	17.5		15.8	17.7	***	
Marijuana	17.2	17.1		16.4	17.8	***	16.3	17.3		
Cocaine	19.4	18.9		19.2	19.5		17.3	19.5		
Hallucinogens	17.8	17.9		17.9	17.7		17.1	17.9		
Opiates	18.0	18.3		17.3	18.8		17.1	18.3		
Designer drugs	19.3	18.9		19.0	19.6		19.0	19.4		
Inhalants	15.9	15.5		15.8	16.1		12.5	16.2		
Steroids	21.8	18.9		22.5	21.0			21.8		
Other illegal drugs	17.8	17.8		17.4	18.3		15.5	18.0		
Prescription pills not prescribed to student	18.3	18.0		17.3	19.2	*	16.6	18.5		
Prescription medicines to get high	17.6	17.6		16.9	18.4		16.6	17.8		
Over-the-counter medications to get high	17.3	16.8		17.2	17.4		14.5	17.7		
Methamphetamine	18.3	18.7		20.6	16.4	*		18.3		

Note: Statistically significant difference at: \* p < .05, \*\*\*p < .001

<sup>&</sup>lt;sup>1</sup> Average age was calculated using the mid-points of the age ranges that were provided as responses.

# ALCOHOL SELECTION AND AVAILABILITY

Underage students who used alcohol in the past year were asked to identify the three easiest ways they obtain it (Table 9). Almost nine in ten students (89%) listed older friends as one of the top three ways to obtain alcohol, and almost that many (83%) listed off-campus parties as one of the three easiest ways. These rates indicate the substantial role that older friends and acquaintances play in how underage students obtain alcohol. One-quarter (25%) of the underage students listed parents (knowingly) as one of the top three ways to get alcohol. Because of the low number of underage students who responded to the survey (n=65) and those who drank alcohol in the past year (n=36), these results should be interpreted very cautiously.

Table 9. Three easiest ways of getting alcohol as reported by students who are under 21 and who used alcohol during the past year  $(n = 36)^1$ 

	Most common response	2 <sup>nd</sup> most common response	3 <sup>rd</sup> most common response
First Easiest	Older friends (58.3%)	Off-campus private parties (16.7%)	From parents with their knowledge (11.1%)
Second Easiest	Off-campus private parties (50.0%)	Older friends (30.6%)	Older siblings (11.1%)
Third Easiest	Off-campus private parties (16.7%)	From parents with their knowledge (13.9%)	On-campus parties, older siblings (11.1%)

<sup>&</sup>lt;sup>1</sup>Underage students were asked to identify the first, second, and third easiest ways that they obtain alcohol. The top three responses in each category are reported in the table.

Fourteen percent of underage IUPUI students reported purchasing alcohol themselves, with over half of them (56%) being able to purchase without being asked for ID. Approximately one in five of the students who purchased alcohol themselves (22%) used someone else's ID, and one in nine (11%) used a fake ID. Bars were listed as the easiest place to purchase alcohol, followed by liquor stores and restaurants. Again, the reader is cautioned when interpreting these rates because of the small number of underage students who purchased alcohol themselves (n=9) (Figures 2, 3 & 4).

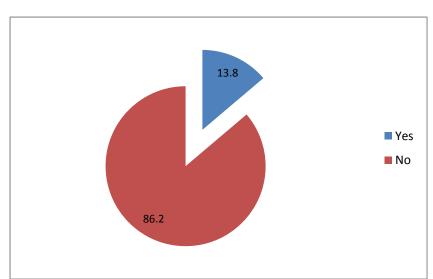

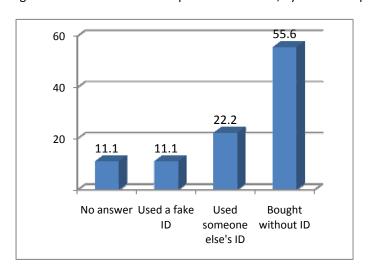

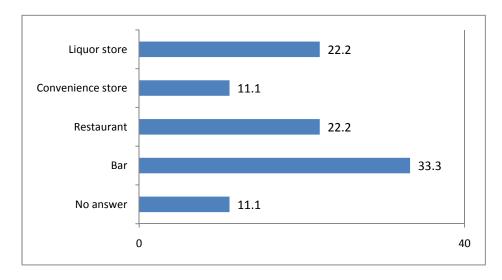

Figure 2. Percentage of students under 21 who reported purchasing alcohol (n = 65)

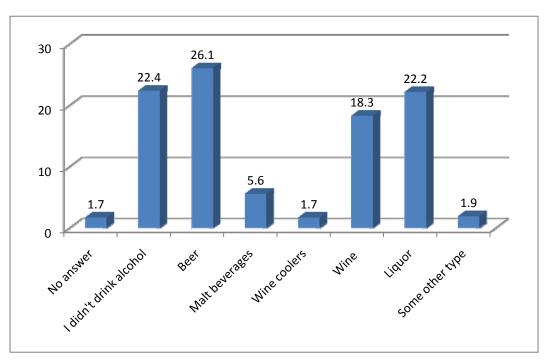

IUPUI students (regardless of age) were asked what type of alcohol they usually drank. Beer was reported by over one-fourth of the students (26%) as the most common kind of alcohol they drank, followed by liquor (22%) and wine (18%).

Figure 5. Percentage of students (all ages) who reported select categories as the usual type of alcohol they drank in the past month

# PERCEPTION OF PEER BEHAVIORS

Students were asked how many alcoholic drinks they thought the typical student at their school consumed the last time he or she partied/socialized. Students could provide any figure between 0-99. The average of the responses from IUPUI students was 5.5 drinks. Responses did not differ significantly between genders or age, or with the state rate.

Table 10. Mean number of drinks respondents thought the typical student consumed the last time he/she "partied/socialized" (range = 0 - 99)

	All Students			By Gender			By Age		
	IUPUI	Indiana	Ma	iles	Females	_	Under 21	21 or Over	
Mean	5.5	5.9	5	.8	5.4		6.7	5.3	
Standard Deviation	6.9	7.8	9.	.2	4.8		11.6	5.7	

The survey also asked participants how they thought other students on their campus felt about using certain substances (Table 11). An astonishingly small 13% thought their peers would disapprove (somewhat or strongly) of trying marijuana once or twice, and only 25% felt their peers would disapprove of smoking it occasionally. Just over half (53%) thought their peers would disapprove of smoking it regularly. Three out of ten IUPUI students (30%) thought their peers would disapprove of taking one or two drinks of alcohol nearly every day and half (49%) thought they would disapprove of having five or more drinks in one sitting. Approximately three-fourths of the students thought their peers would disapprove of trying cocaine, LSD or amphetamines once or twice, while more than eight out of ten thought their peers would disapprove of regular use of those substances.

Table 11. Percentage of students who thought other students on campus would approve/disapprove of select behaviors

	Strongly approve	Somewhat approve	Neither approve or disapprove	Somewhat disapprove	Strongly disapprove	No answer
Trying marijuana once or twice	15.9	42.7	26.3	6.3	7.1	1.7
Smoking marijuana occasionally	6.9	35.3	31.0	15.9	8.8	1.9
Smoking marijuana regularly	3.4	17.5	23.7	34.9	18.5	1.9
Trying cocaine once or twice	1.1	7.3	16.2	38.1	35.6	1.7
Taking cocaine regularly	0.6	0.9	8.8	17.7	70.0	1.9
Trying LSD once or twice	0.6	8.0	17.0	34.9	37.5	1.9
Taking LSD regularly	0.6	0.6	10.1	18.3	68.1	2.2
Trying amphetamine once or twice	1.3	7.3	16.8	30.2	42.7	1.7
Taking amphetamine regularly	0.4	2.2	9.7	19.4	65.7	2.6
Taking one or two drinks of an alcoholic beverage nearly every day	12.7	28.7	27.4	21.3	8.4	1.5
Taking three or four drinks nearly every day	5.2	12.7	22.2	28.0	30.2	1.7
Having five or more drinks in one sitting	7.5	14.7	27.4	23.9	24.6	1.9
Taking steroids for body building or improved athletic performance	1.3	5.0	21.1	32.1	37.9	2.6

# **GAMBLING BEHAVIOR**

The most common form of gambling reported by IUPUI students was playing the lottery (32%), followed by gambling at a casino (21%). IUPUI students reported significantly higher rates of gambling at a casino than the statewide rate of all Indiana students participating in the 2010 survey, but significantly lower rates of playing cards at home for money (14%). Male students reported much higher rates of gambling than female students for several gambling behaviors. One in five male students played cards at home for money in the past year (20%), compared to 10% of the female students. Fifteen percent of the males gambled in betting pools and 10% bet on fantasy football. Students 21 or older were much more likely to gamble at a casino (24%) than younger students (3%).

Table 12. Percentage of students reporting gambling experiences in past year

	All Students		Ву	By Gender			By Age		
Substance	IUPUI	Indiana <sup>1</sup>		Males	Females		Under 21	21 or Over	
Played cards at home	13.8	17.6	*	20.1	9.6	**	20.0	12.8	
Gambled at a casino	21.1	14.5	***	22.3	20.4		3.1	24.1	***
Gambled on-line	1.7	3.3		4.3	0.0	***	1.5	1.8	
Bet on fantasy football/basketball	5.6	5.6		10.3	2.5	***	6.2	5.5	
Betting pools (ex: March Madness)	9.1	11.7		15.2	5.0	***	10.8	8.8	
Lottery	31.7	30.7		35.3	29.3		29.2	32.1	
Placed bet with bookie	0.2	1.0		0.5	0.0		0.0	0.3	

Note: Statistically significant difference at: \* p < .05, \*\*p < .01, \*\*\*p < .001

<sup>&</sup>lt;sup>1</sup>One of the schools participating in the 2010 survey did not include the gambling questions so they are not represented in the state data.

Students were asked how frequently they gambled to assess the level of problem gambling. Less than two percent of the students reported playing the lottery (1.7%) at least once a week in the past year (Figure 6). The most common negative consequence of gambling reported by IUPUI students was feeling bad about their gambling (3%) (Table 13).

Figure 6. Percentage of students who reported weekly or more frequent gambling in past year, by gambling category

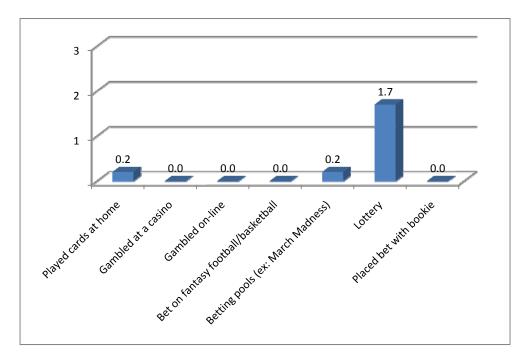

Table 13. Percentage of students who gambled in past year, who reported select consequences as a result of their gambling (n = 211).

Consequence	IUPUI	Indiana
Academic problems (missed class, did poorly on exam, lower grades)	0.0	0.3
Issues with legal system	0.0	0.2
Financial issues	0.5	2.4
Felt bad about gambling	2.8	4.7
Poor physical health (sleep issues, depression, poor nutrition, poor hygiene)	0.0	0.5
Issues with friends and family (lied, strained relationships, arguments)	0.0	1.0

# CHARACTERISTICS OF SURVEY PARTICIPANTS

Three-fifths of the IUPUI survey respondents were female (60%), and almost nine in ten (86%) were 21 or older. The majority were White (83%) and non-Hispanic (96%). Over one-third of the IUPUI students (38%) were graduate/professional students and a near equal number (39%) were juniors or seniors. Only 19% classified themselves as freshmen or sophomores. Almost three-quarters (73%) were full-time, and almost all (95%) lived off-campus.

Table 14. Demographic characteristics of survey participants

	Frequency	%
