

This report provides the six-year graduation rates for the 1986, 1987, and 1988 cohorts based upon the methodology established by the Student-Right-to-Know Act (SRKA) proposed regulations. Comparable five year rates are provided for the 1989 cohort. The SRKA methodology establishes full-time beginners (FTB) as the student cohort for reporting purposes. For IU as a whole and for each of the campuses, this report provides tabular data on the 1986-89 cohorts by entry status and first semester course load. On the facing pages, the 1988 cohort is compared to the combined 1986 and 1987 FTB cohorts on ethnicity, gender, age, and SAT score.

Each line of the report provides the number that began, the number of students who received certificates within 1.5 years, associate degrees within 3 years, and the number and percentage of FTB students receiving baccalaureate degrees within 4, 5, and 6 years. The total percentage (total %) is the official graduation rate and is the sum of the reported certificate, associate, and baccalaureate degrees divided by the number that began.

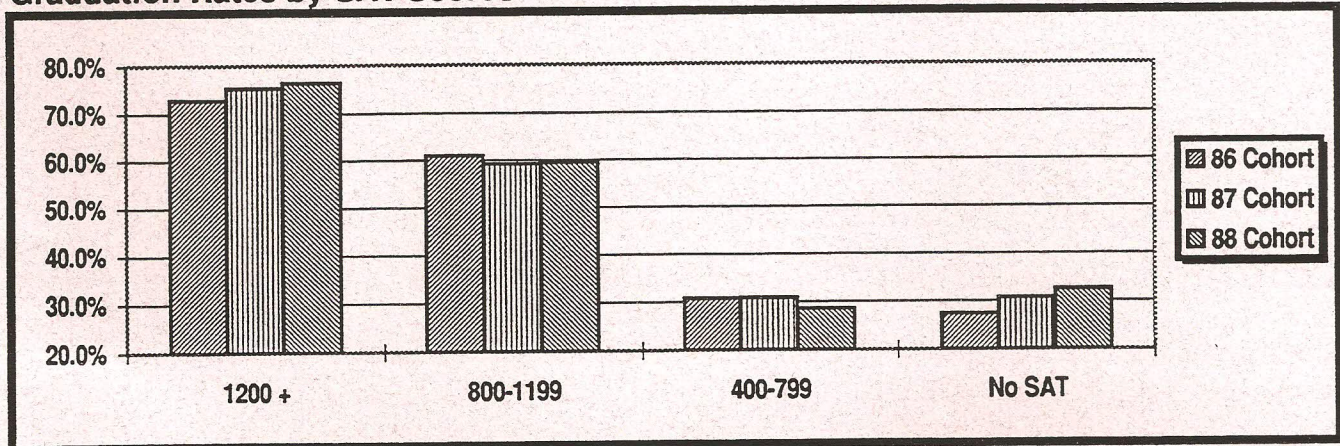

Across the university, the 1988 FTB graduate rate has improved by .3 of a percentage point over the 1986 rate and by .1 of a percentage point over the 1987 rate. The first graph below illustrates the percentage of FTB students receiving baccalaureate degrees within 4, 5, and 6 years for all available cohorts. The percentage of students receiving a baccalaureate degree within four years has risen from 29.0 percent with the 1986 cohort to 29.7 percent with the 1989 cohort. The second graph displays the positive relationship between SAT scores and graduation rates.

Among the campuses, Bloomington, East, Northwest, and Southeast all realized gains in graduation rates over the previous cohorts. Campus specific pages follow the university wide graduation rates. As always, your comments and questions are welcomed.
