

This report provides views on the 1996, 1997, and 1998 incoming student cohorts' persistence to the second year. As previewed in report 8.2, the new logic for defining incoming student cohorts recognizes the increasing population of students who began taking college courses in high school and also responds to changes implemented for federal reporting. High school students, which make up the majority of the difference between the old and new cohorts, have been historically excluded by virtue of their entry semester and class. These students are coded as non-degree seeking when they begin taking courses, and when they arrive on campus after graduation from high school, they are coded as returning students. Hence, this group was previously excluded from student cohorts. Secondly, the federal government further refined their cohort definition to include students who were enrolled in any summer session prior to the fall semester. Previously, the federal definition implied only second summer session enrollments should be included in the cohorts.

The new report format focuses on beginners who were full-time in their first fall semester. Past reports provided breakdowns on various characteristics for the entire incoming cohort (beginners and transfers combined). With this report, both below and on the first table on the campus pages, the persistence rates of beginners, transfers, and the overall cohort are displayed followed by a table that pertains to only the full-time beginners (FTB) population. This change in format responds to the guidelines for external publications (USNWR, College Board, Peterson's) to report on the FTB group exclusively.

Several new variables have been added to the report. The proportion of the incoming overall and beginner cohorts represented by the FTB subset is portrayed by percentages. This figure speaks to the composition of the cohorts at IUPUI and the regional campuses and has been proposed as a new data element collected by IPEDS. Four levels of persistence by high school rank is provided as well as figures for the top five reported high schools. The raw cohort figures contained on these pages can become small when disaggregated by different variables. To protect student privacy, cells with a "began" number of ten or less are masked.

Comments and suggestions are welcomed.
