Retention and Graduation Rates Primer

Understanding the Campus Panels

Various stakeholders and external groups require colleges and universities to calculate and supply data on retention and graduation rates. As a very public measure of our success at educating and credentialing students, these metrics provide a valued method of comparing institutions. These measures rely on a cohort model of tracking; including only those incoming beginner students who were taking a full-time course load in the fall of the first semester. Regardless of what happens beyond the first semester, e.g. becoming part-time, these same students are “tracked” and reported on for years to come. For a residential campus like Bloomington this model is fairly representative. However, IUPUI and the regional campuses – because of the dynamic student populations they serve – do not compare well to fully residential campuses.

At IU we provide an inclusive view of activity within the university. The outcome of a student who starts at Kokomo but re-enrolls and/or receives a degree at IUPUI will be credited to the “home” campus of Kokomo. Historically, between 2 and 5% of our retention and graduation rates can be attributed to intercampus mobility.

Retention is typically measured by how many students return for a second year of education. This is defined as re-enrollment in the subsequent fall or completion of a degree. Because students may not make a two semester commitment to their education, retention to the second semester is a valid, intermediate measure of persistence. The first panel in this report compares these various measures for FT beginner cohorts since 2007.

Graduation rates begin with the same cohort of incoming beginners who were full-time but the “numerator” becomes the receipt of a degree. The rates in this panel reflect *only* students who intended to earn bachelor’s degrees and were successful in gaining that credential in four, six, or eight years. Additionally, the right hand side of the chart shows where the IU campus graduation rates fall among their peers.
